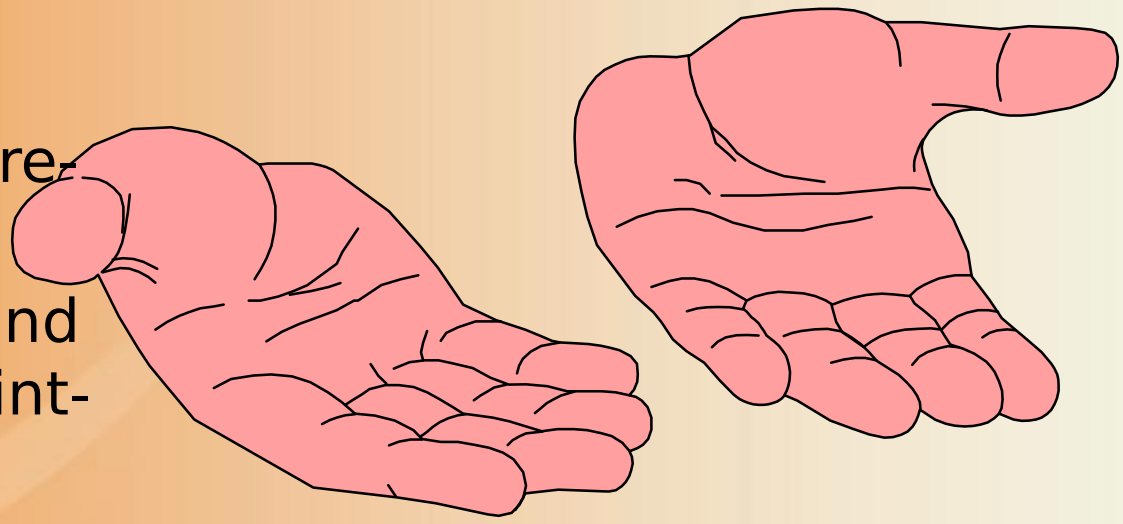
Health Assessment Review Tool (HART) Overview
November 2006

Ollie Gray, RN, LTC (Ret)

What is a Coupler?

- Collect complete, relevant data about the Problem
- Couple with literature-based knowledge
- Improve guidance and plan of action at point-of- care
- Incorporate resources and guidelines from the user organization

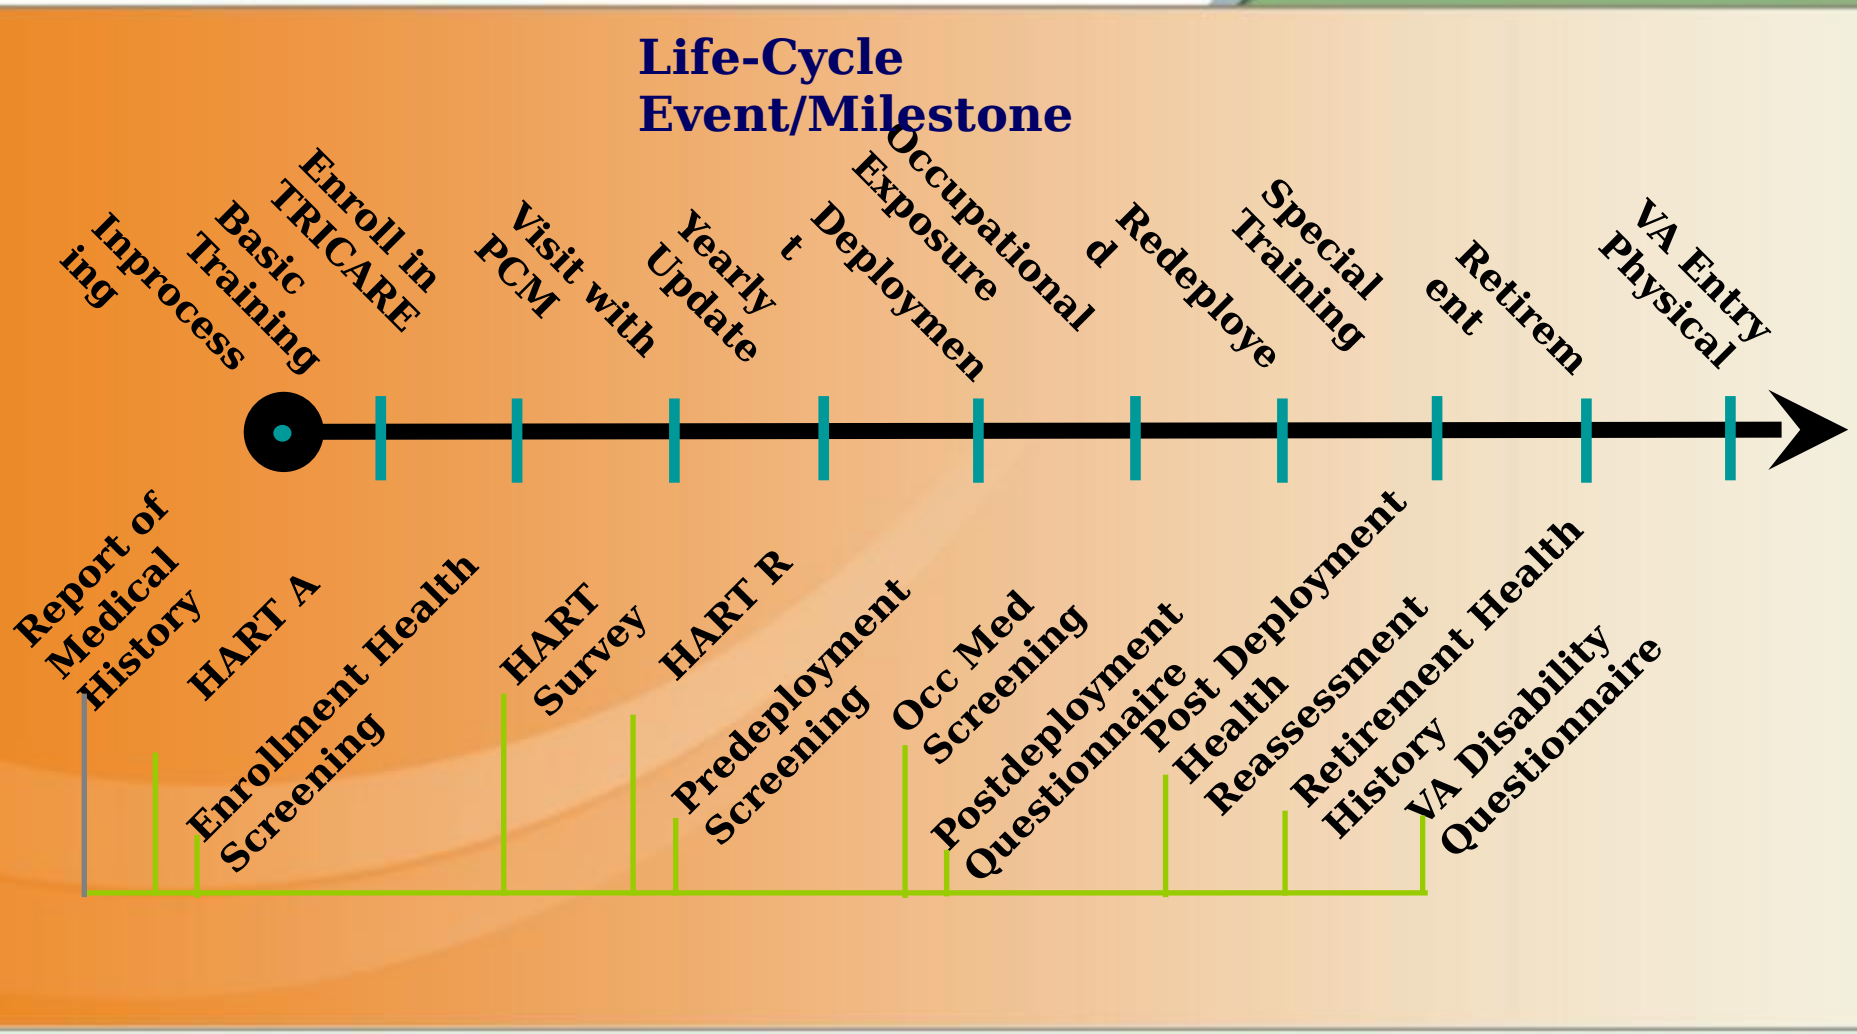


MHS Mission for SRTs

The MHS vision for self-reporting tools is to develop an integrated, lifelong record of self-reported health information, tailored to population, time, and situation. These self-reporting tools will use multiple electronic modalities, provide patients and providers with immediate feedback, support the delivery of preventive services and health care to all beneficiaries, improve healthcare outcomes, enhance MHS, regional, and facility population health programs, and support Force Health Protection by contributing to a Fit and Healthy Force.

Self-Reporting Tools Systems Concept of Operations. Dec 2002

SRT Life Cycle



Evolution of the Health Assessment Review Tool

HEAR 1.3

- Administered by MCSCs to all TRICARE Prime enrollees
- Access problems
- Poor return rate and poor utilization by MTFs

HEAR 2.0

- Integrated with Preventive Health Care Application
- Redesign of HEAR Survey content and format
- Provided stand-alone access to HEAR

HEAR 3.0

- Administered by MTF/Unit per draft Concept of Operations
- Content updated based upon independent Yale study & DoD JAD
- Real-time review/interaction with Medic/Tech/Nurse enhances benefit of HEAR and facilitates preventive health interventions

HART 1.0

- Renamed the Health Assessment Review Tool (HART) late 2005
- Content updated to include additional validated tools by DoD JAD
- Added HART-R for Readiness and HART-A for Accession
- CHCS II and TOL integration
- April 2006 HA Policy for use of HART for PHA

??? supplied service
This database and reporting functions managed by a centralized organization
Internet accessible Directory
SDCopy app Supplied by PKC
Population health database De-identified HART sessions
PKC will supply SQFilter app To facilitate reporting
Raw data feeds for ad hoc reporting
And pre-configured reports provided to all services by a centralized organization
Population level reports for each service
Tricare Beneficiary
Guard and Reserve
Northrup supplied service
CHCS II
COMPOSITE HEALTH CARE SYSTEM II
CDR
database of identified HART sessions for populating individual clinical records
Fully Identified data TSB coded
.xml document Created with All HART data
EDI_PN
DMISID
UIC
Guard and Reserve
The initial phase of implementing the HART series of self-reported survey and guidance tools on TricareOnline:
Making access easy for beneficiaries, getting the data flowing into the CDR, and enabling useful population level reporting for the three Services, Tricare beneficiaries, Guard, and Reserve.
